WHAT OUR CLIENTS ARE SAYING

“Our collaboration with Internap has grown to such an extent that we could not provide high-quality online content without them.”

Joseph Beyer, Associate Director (Sundance Institute Online)

Internap Home > Internet Connectivity

The strength of multiple providers plus powerful route optimization

The Internap Difference

With conventional business Internet services, you're only getting ideal performance a fraction of the time. Our exclusive Private Network Access Point (P-NAP®) architecture harnesses the power of multiple carriers to deliver consistent performance and ensure we have the highest levels of redundancy and reliability. And only Internap offers Managed Internet Route Optimizer™ (MIRO), our patented optimization software solution that leverages the diversity of the P-NAP architecture to find and use the best routes through the Internet.

[Learn more about our exclusive technology.](#)

“ ”

Internap is just awesome. That's all I have to say. A special place in heaven will be reserved for you guys.
- Fredrick Kendell

The Differences

Their Approach

Service Providers

Single Backbone

Availability

Problems on the backbone or connections to other carriers will affect your traffic and overall availability.

Performance

Performance is only guaranteed while your traffic is on the carrier's network. Transmissions frequently traverse at least two networks (often more) between you and the final destination.

The Internap Approach with P-NAP & MIRO Technology

Leveraging up to 11 major carriers simultaneously

Internap can route around issues on any carrier to ensure network availability.

By monitoring performance over all available carriers and actively managing our routes, Internap traffic is always sent over the best performing network at any given time

What are your pain points?

Diminishing Returns

Consistency

Broken Promises

Poor Performance

Pain Point

You've invested heavily in improving the performance and reliability of your application and infrastructure, because your business is driven by your users. Throwing money and resources into endless database optimizations and enhancements to your SAN is yielding diminishing returns.

How We Help

Internap's unique P-NAP architecture and MIRO technology can solve for 'middle-mile' Internet performance and reliability problems which otherwise go unmonitored, unreported, and therefore accepted as unmanageable. Don't accept the status quo.

[Learn more about how Internap vanquishes middle-mile Internet problems.](#)

eCenta America

Internap Home > Managed Hosting

Industry-Leading, Robust Managed Hosting solutions tailored for you

Exceptional Managed Hosting, Tailored For You

Managed Hosting relieves the daily pressures of IT infrastructure maintenance, so your resources stay focused, growing your core business. Internap Managed Hosting delivers additional advantages that you won't find with other providers:

A complete hosting solution tailored to your needs by experienced solutions architects who focus on designing hosted solutions for enterprises like yours. Unlike smaller providers who offer pre-packaged configurations, we can address your unique challenges, whether they require a few servers or a few hundred.

A support organization and industry-leading SLA on which you can depend. Our Network Operations Center (NOC) operates as an extension of your business, with our certified engineers working for you around the clock, every day of the year.

Incomparable performance, thanks to our exclusive approach to Internet connectivity . Our patented Managed Internet Route Optimizer (MIRO) technology ensures that your business operates transparently, over the fastest, most reliable network.

Internap also offers a powerful Content Delivery Network, allowing us to build efficient, integrated solutions for hosting, managing and delivering your rich media content.

[Learn more about our exclusive technology.](#)

Internap Managed Hosting delivers the hardware, software, services and expertise you need

Financial Advantages

Establish predictable expenses and project for growth. Eliminate maintenance cost surprises

Save on upfront capital expenditures

Refocus technical staff on revenue generation

Operational Advantages

Achieve higher network availability for greater productivity and customer satisfaction

Address unpredictable business needs

Scale quickly for speed to market

What are your pain points?

Finding the Perfect Fit

The Harsh Reality of Downtime

Getting Nowhere?

Growing Pains

Pain Point

Your business needs a high-performing IT infrastructure solution delivered quickly. It must be capable of scaling and evolving for new ventures and revenue models.

How We Help

Our expert architects design infrastructures with the right hardware, software and services that deliver exactly what you need. Since customers' needs can evolve fast, our data centers are designed to make modifications and expansion painless and efficient. Long-standing supplier relationships mean earlier delivery on equipment for your changing requirements. [Learn more about the solutions and advantages of Internap](#)

Internap Home > Content Delivery Network

The highest quality video experience available for any network device

The Internap Difference

Internap operates a world-class Content Delivery Network (CDN). We offer live and on-demand streaming services for Adobe® Flash, HTTP Streaming for iPhone® and iPad™, and streaming services for Windows® Media and Microsoft® Silverlight. The Internap CDN provides the capacity, coverage and expertise you need to successfully distribute high-bandwidth, digitally-rich content to your audience – regardless of device. Our CDN is an excellent fit for a wide range of content and businesses:

Content & Applications

Live Events & Broadcasts
Streaming Audio/Video On-Demand
Training Courses
User-Generated Video
Electronic Software Distribution for Gaming

Who Internap Serves

Educational Institutions
Faith-based Institutions
Healthcare
Media & Entertainment
Technology Companies
Finance and Insurance
Advertising, Marketing & Interactive Agencies

Prepared for Anything

Other CDNs opt to serve up content “as is,” which means that the content creator is responsible for providing separate versions for streaming in each video format. At Internap, we do the technical heavy lifting by creating a compatible file for all popular devices, including ones that work with iPhone and iPad, as well as streaming formats for Adobe Flash® and Microsoft Silverlight™. Then, when a user views the video, adaptive bitrate adjustments dynamically optimize the stream for the bandwidth of the network, so that the best quality presentation is made on that particular device.

Enhanced Delivery

Internap provides route-optimized CDN services that enable you to deliver a heightened end-user experience. Our exclusive Private Network Access Point (P-NAP®) architecture alongside patented Managed Internet Route Optimizer™ (MIRO) technology results in optimal path selection to minimize performance issues. [Learn more about Internap's unique technology.](#)

We Watch the Watchers

Knowing your audience is critical. Our MediaConsole® reporting system delivers easy-to-understand details that can direct your business. [Learn more about the MediaConsole dashboard and its reporting tools.](#)

Pick an Apple

We optimize for viewing on Apple iPad, iPhone and iPod touch®, so Internap customers are already delivering to this growing group of users.

Internap is just awesome. That’s all I have to say. A special place in heaven will be reserved for you guys.
- Fredrick Kendell

Internap Home > Colocation

Delivers redundancy, flexibility, support and optimized connectivity

Delivers flexibility, support & optimized connectivity

Colocation is ideal for enterprises that need to maintain flexibility, reduce risk and stabilize capital and operating expenses. With our colocation service, your servers and related equipment are in a secured space in a secure data center with established Internet connectivity. Once you decide to place your infrastructure with a colocation service provider, it’s important to recognize that not all colocation services are created equal.

Internap Colo Advantage

Internap provides exceptional, end-to-end colocation service, including:

Speed to Market – Internap uses a modular approach and maintains sufficient inventory reserve so that we can complete our build-outs in less time than smaller colocation providers.
[Learn more about our colocation services.](#)

Industry-Leading Service Levels – Internap’s [Service Level Agreement \(SLA\)](#) supports 100% network availability, as well as latency, packet loss and jitter metrics second to none¹

Enhanced IP Connectivity – Seamless integration with our Performance IP™ service delivers the strength of multiple carriers and the patented intelligent routing of our [Managed Internet Route Optimizer™ \(MIRO\) technology](#)

Future-Proof Scalability – For nearly 15 years, Internap has offered colocation services to thousands of businesses. As an established provider, we have invested in the space, power and systems necessary to keep pace with the fastest expanding enterprises.

Industry-Leading Support – Internap offers an entirely different class of service which includes proactive around-the-clock monitoring by certified engineers who staff our [Network Operations Center \(NOC\) 24/7](#)

¹Based on North American Performance Metrics

What are your pain points?

Can’t lose control and insight

Keep Sprinting Ahead

Need Extra Hands

Pain Point

Moving your equipment off-site can be daunting, so you want to be sure you’re choosing the best “home” for your hardware.

How We Help

Internap works hard to provide you with peace of mind. We offer relief from the complexity of managing data center facilities, freeing up your time to focus on your core business. Internap offers best-in-class security, climate control, fire-threat detection and redundancy. Our exceptional IP connectivity and the option to use our additional services, such as Content Delivery Network (“CDN”), are advantages you won’t find with other colocation providers.
